Claim 29 has been cancelled. The active claims are 1-28.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 3-14 and 23-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Laun.

Claims 2, 15-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Laun in view of Nashimoto.

Details of the rejection have already been set forth in the last Office action. The details are incorporated herein by reference thereto.

In the communication filed on 9/9/2003, Applicants contended that Yung does not teach register file segments being implemented as addressable arrays and being partitionable into global registers and local registers. On the contrary, Yung clearly points out that a single centralized register file is not ideal (column 6, lines 21-22). His register file system is a hierarchical one which includes global register files and local register files. Those register files are physically partitioned. One of ordinary skill in the art should recognize that a register file can be programmatically partitioned into segments as evidenced by Laun. Whether

Art Unit: 2155

global and local register files are implemented by physically partitioned or programmatically partitioned is a matter of design choice.
